Data Visualization Project

Purpose

This project is to consider how digital data tools allow you to curate and narrate the stories of religious communities. Data representations invite unique types of questions on curation and presentation and ethical engagement. Because you'll be working with a closed data set, the project will not have a proposal period.

Project breakdown

1. **Data Visualization** - 7 points - Due December 3
   Your visualization should offer a clear presentation of data that narrates a particular story you want us to understand about the religious community/communities you are presenting.
2. **Evaluation** - 5 points - Due December 3
   The evaluation should be a 300-400 word reflection on the process. You should include any thoughts you have about the appropriateness of your data selections and visualizations in delivering your narrative and/or learning objectives; the selection of tools; any learnings about religion or your communities of interest.
